

# OSIRIS® Education

The Growcer Education farm is specifically configured to support the learning goals of students and youth exploring careers in agriculture, food security, and sustainability. Built with a unique learning space within the farm so that students, with teacher supervision, can explore the day-to-day science of controlled environment agriculture while actively growing greens that can be sold, distributed, donated, or used directly in their institution's food services.

Curriculum also available. Please Inquire.

## PRODUCT FEATURES

- Left side grow rack removed to provide more room for teaching and learning in the farm.
- 1,536 planting sites, able to generate 5,700 lbs of produce per year.
- Same loss-resistant deep water culture technology as Osiris, with optional autodoser leading to less time in the farm for operators, making it easier for educational institutions to manage.
- Includes K-12 land-based curriculum providing hands-on teaching modules on climate change, traditional Indigenous knowledge, and plant science.
- Pairs well with the Shelf for an all-around educational experience in classroom and in farm.
